

TRITON MINERA, S.A.

April 20th, 2001

To whom it may concern:

TRITON ENERGIA had a geothermal concession called "El Bonete" in Nicaragua, which needed to be developed in terms of finishing its energy potential and specifically we required pointing out the drilling targets.

Phoenix Geophysics was hired in March 1999, and performed a Magneto Telluric Survey on a 100 km² grid, while the original plan covered a 100 stations. The results obtained and interpreted (100 hundred stations at 1km spacing) during April-May, 1999, in the field led to conduct an extra 47 MT site surveys.

We were extremely satisfied with the work that was carried out; they demonstrated a high degree of professionalism and knowledge. We would not hesitate to engage their services in the future and have no trouble in offering a strong recommendation letter to whoever should be interested in contracting their services.

Sincerely,

Daniel Goffaux
